THE DAY ONE STACK

Make today day one.

The tools I use to build, the order to set them up, and 30 prompts you can copy and paste today.

10 TOOLS | 6 LAYERS | 30 PROMPTS | $0 TO START

The biggest mistake I made was thinking this wasn't possible for me, for way too long. I assumed other people had qualifications I didn't. They didn't. They started.

Most of what made me faster wasn't one big moment. It was years of trying things, money lost on ads, and tools I didn't know existed that made me 10x more productive. This is that list, so you don't have to spend the years.

One rule before you open anything: add a tool only when the pain of not having it is real. Fewer tools, more progress. Day one costs $0.

Eli Christiansen, founder of 127

START HERE

The $0 day-one stack

If you do nothing else, start here. All four have free plans. Set them up in one afternoon.

CLAUDE | PERPLEXITY | NOTION | CAPCUT

LAYER 01

DAY ONE

Think

Research and thinking partners. Every other layer gets better when you start here.

Claude

Your thinking partner, writer and builder.

I use Claude for prompting, workflows and building: offers, copy, and even website-building prompts that get a page live in an afternoon.

SET IT UP

1. Create a free account at claude.ai.
2. Create a Project for your business. Add a short context doc: who you serve, your offer, your voice, what customers have told you.
3. Run the prompts in this guide inside that Project, so every answer knows your business.
4. Save the prompts that work into a Notion page. That becomes your playbook.

Cost	Free plan, paid for heavy use

AI is only as good as the context you give it. Feed it real customer words, not your guesses.

Px

Perplexity

Research with sources you can check.

Before I commit to anything I ask: is this market growing or shrinking, and how is AI changing it? Perplexity is where that research starts.

SET IT UP

1. Sign up free at perplexity.ai.
2. Create a Space for your business so your research stays in one place.
3. Ask the market and competitor prompts below. Open the sources every time.
4. Copy what holds up into Notion. Throw out anything you could not verify.

Cost	Free plan

Never put a number in a pitch you have not checked at the source.

LAYER 02

WEEK ONE

Organize

One home for your plans, content and weekly review, so nothing lives only in your head.

N Notion

Your operating system.

My content scheduling frameworks and templates live in Notion.

SET IT UP

1. Create a free workspace. Make four pages: Home, Content Calendar, Weekly CEO Review, Ideas.
2. Make Content Calendar a database with Status, Platform and Publish date.
3. Add a board view by Status: Idea, Scripted, Filmed, Posted.
4. Every Monday, fill in the Weekly CEO Review (prompt 28 writes it with you).

Cost Free plan

If it is not written down, it is not a system. It is a memory.

Mi Miro

Think on a whiteboard.

I build out templates and plans on Miro boards before they become anything else.

SET IT UP

1. Create a free account and one board per project.
2. Start from a template: customer journey map, brainstorm, or launch plan.
3. Map how a stranger becomes a customer, step by step. Circle where people drop off.
4. Share the board with anyone helping you so you plan in one place.

Cost Free plan

If you cannot draw how a stranger becomes a customer, you do not have a business yet. You have a product.

Sell

Trust beats everything else in sales. These two make sure no conversation is wasted.

Attio

A CRM that builds itself from your email and calendar.

Attio is the CRM in my stack. Relationships are the business.

SET IT UP

1. Create a workspace and connect your email and calendar. Attio builds your contacts from them.
2. Create a list called Pipeline with stages: Talked, Interested, Offer sent, Won, Lost.
3. After every conversation, add a two-line note and move the stage.
4. Every week, follow up with everyone sitting in Interested.

Cost	Free plan
Wait if	Under about 10 conversations a month? A simple Notion table works until then.

Your network is your net worth. A CRM is how you stop losing it.

Gr

Granola

Meeting notes that write themselves.

Granola is how I capture calls without breaking eye contact to type.

SET IT UP

1. Download the app and connect your calendar.
2. It transcribes from your device, so no bot joins the call. Always tell people you are taking notes.
3. Jot rough notes during the call. Granola fills in the rest when it ends.
4. After discovery calls, copy the exact phrases customers used into your offer doc.

Cost	Free to start

Ask about their past, never pitch. Their words become your headline.

LAYER 04

WHEN YOU START POSTING

Create and distribute

Authenticity and consistency. When something works, make more like it.

Cc CapCut

Edit short-form video on your phone.

CapCut on iPhone is how I edit fast. Learning editing and workflows is a big part of how my content passed 25 million views.

SET IT UP

1. Install CapCut. Film vertical (9:16) in good light.
2. Cut everything before the hook. The first two seconds decide everything.
3. Turn on auto captions and fix the words it gets wrong.
4. Save your best edit as your template so every video looks like you.

Cost	Free, paid extras

If a video works, use that format again. Do more of what works, not just more.

Hf Higgsfield

AI video for b-roll and visuals.

I use Higgsfield for AI video when filming it for real would cost a crew.

SET IT UP

1. Create an account and start from one image plus a short prompt.
2. Try the camera motion presets for b-roll and hooks.
3. Use it for visuals and concepts. Never to fake a customer, a result or a review.
4. Cut the clips into your CapCut template.

Cost	Free credits to try, then paid
Wait if	Get consistent with real, simple content first.

How you do one thing is how people see you do everything. Integrity in every frame.

Mc

ManyChat

Turn comments into conversations.

ManyChat turns "comment ROADMAP" into a DM with the link, automatically.

SET IT UP

1. Switch Instagram to a professional account and connect it to ManyChat.
2. Create an automation: when someone comments your keyword on a post, send a DM.
3. The DM gives the link and asks one question. Keep it human.
4. Put the keyword in every post's call to action.

Cost	Free plan
Wait if	Posting less than three times a week? Fix consistency first.

Make the next step so easy it feels rude not to take it.

LAYER 05

IF YOU SELL A PHYSICAL OR DIGITAL PRODUCT

Sell products

A real store when you have proof people will buy.

Sh

Shopify

Your online store.

Shopify is in my stack for e-commerce. My brand's first drop sold out, with customers in 35 of 50 states and 100+ creator ambassadors behind it.

SET IT UP

1. Start a trial and pick a free theme. Do not customize for a week.
2. Add one product with real photos and a description in your customer's words.
3. Set up payments and shipping, then place a test order yourself.
4. Launch to your warm list before you spend a dollar on ads.

Cost	Free trial, then paid
Wait if	Selling a service? A payment link is enough on day one.

Quality before growth. A bad product kills a company faster than marketing can grow it.

LAYER 06

WHEN YOU ARE GROWING

Systems

Your business is only as valuable as it is when you are not there to run it. This is how I build harnesses to run a business: AI coworkers that plug into the stack.

IF **Granola call ends**

→ Claude summarizes it and drafts the follow-up

→ Attio gets the note and the next stage

IF **Notion idea marked Ready**

→ Claude drafts the script and five hooks

→ CapCut edit, then the post goes in the calendar

IF **ManyChat captures an email**

→ Your email tool sends the welcome

→ The lead lands in Attio with where they came from

IF **Monday morning**

→ Your numbers pull into the Weekly CEO Review

→ You pick three priorities, not ten

Start with one. Get it running, review the first three runs, then let it go. The Automation Starter Pack inside 127 Builder walks through each step.

THE PROMPTS

30 prompts. Copy, fill the brackets, run.

Use them in a Claude Project that knows your business. Research prompts work best in Perplexity. Replace every [bracket] with something real.

FIND AND VALIDATE

01

Score my ideas

You have more than one idea

```
I have these business ideas:
1. [idea]
2. [idea]
3. [idea]

About me: [skills, experience, network, hours per week, budget].

Score each idea from 1 to 10 on: real pain (do people already pay to fix it?), my unfair advantage, how fast I could get a first paying customer, cost to start, and whether the market is growing. Put it in a table. Then tell me which one to pick and the one reason the others lose. Be blunt. Do not invent market numbers; tell me what to verify instead.
```

02

The problem in their words

Before you build anything

```
My idea: [idea]. Who it is for: [specific person].

Write the problem I solve in one sentence, the way that person would say it to a friend. No jargon. Then give me 5 alternate versions, from most emotional to most practical. Then tell me which assumption in my idea is most likely wrong.
```

03

Discovery interview script

Before customer conversations

```
I am interviewing [type of person] about [problem]. Write a 15-minute discovery interview script.

Rules: ask only about their past behavior, never hypotheticals. Never pitch my idea. Include an opener that makes it comfortable, 8 questions that dig into the last time the problem happened, what they tried, what they paid, and what it cost them, plus 3 follow-up questions for when they give a vague answer. End with how to ask for a referral to two more people.
```

04

Market direction check

Use in Perplexity

```
Research the market for [product or service] for [customer]. With sources:
1. Is it growing, flat or shrinking? What is driving that?
2. How is AI changing this market: making the problem bigger, smaller, or easier for anyone to solve?
3. Who are the 5 biggest players and what do they charge?
4. What do customers complain about most in reviews?
Flag anything you are not confident about.
```

05

Alternatives scan

Use in Perplexity

```
List every way [customer] currently solves [problem], including doing nothing, spreadsheets, hiring someone, and existing products. For each: what it costs, what people like about it, and the top complaint. Then tell me the gap a new option could own. Cite sources.
```

06

Make sense of my interviews

After 5+ conversations

```
Here are my notes from customer conversations:
[paste notes or Granola transcripts]

Find: the phrases that came up more than once (quote them exactly), the problems people already spend money on, what they hate about current options, and any signal that someone would pay now. Then tell me honestly: is this a real problem worth building for? What should I ask in the next 5 conversations?
```

07

Pre-sell test

Before you build the product

```
I want to prove people will pay for [idea] before I build it. Design 3 ways to test it this week with under $50, ranked from strongest to weakest proof: a pre-order, a paid pilot, a deposit, a waitlist with a price, etc. For each: exactly what I say, what counts as a pass, and what counts as a fail.
```

OFFER AND PRICING

08

One-page offer

Turn the idea into something you can sell

```
Build a one-page offer for [product] for [customer]. Include: the headline result in their words, who it is for and who it is not for, what they get, the timeline to the first result, the price, a guarantee I can actually keep, and the next step. Keep it under 200 words. Then list 3 ways it is still vague.
```

09

Make it too good to refuse

Your offer gets "maybe"

```
Here is my offer: [offer]. Make it so good people feel they would be crazy to say no, without lying or overpromising. Suggest: bonuses that cost me little but matter to them, a stronger guarantee, a faster first result, removing risk, and better framing. Rank the changes by impact and flag anything I could not deliver.
```

10

Price it right

Setting or raising a price

```
I sell [offer] to [customer]. It saves or makes them [value, in time or money]. Competitors charge [prices].

Give me 3 pricing options with the reasoning for each. Then rewrite how I present the price: frame the cost as the lowest possible number (per day, per use) and the value as the highest (what it saves or makes over a year). Show the exact words.
```

11

Do the numbers work?

Before you spend on growth

```
Check my unit economics. Price: [price]. Cost to deliver one: [cost]. How I get customers: [channel]. My best guess at cost to win one customer: [guess]. How often they buy: [frequency].

Tell me my margin, how many customers I need to hit [monthly goal], and the one number that breaks this model. Show your math. Do not give financial advice; just check the logic.
```

12

Handle the objections

People look but do not buy

```
These are the objections I hear: [list]. For each: what they are really worried about, an honest answer that builds trust, and a change to the offer that removes the objection entirely. No pressure tactics.
```

BRAND AND WEBSITE

13

Brand on one page

Before you design anything

```
Create a one-page brand sheet for [business], for [customer]. Include: one-line positioning, 3 personality words with what each means and does not mean, voice rules (5 do, 5 do not), 3 taglines, a color direction and a type direction. Base it on these customer words: [paste phrases from interviews].
```

14

Name it

You need a name

```
Give me 20 name ideas for [business] that is [personality]. Mix: real words, compound words, invented words and founder-led names. Each must be easy to say after hearing it once. For your top 5, explain why and what to check: domain, social handles and trademark conflicts (tell me to verify, do not assume).
```

15

Landing page copy

Before you build the page

```
Write landing page copy for [offer] for [customer]. Sections: headline (the result in their words), subhead, 3 problem bullets, how it works in 3 steps, what you get, proof (leave [placeholders] for real proof; never invent testimonials or numbers), FAQ with 5 real objections, and one call to action repeated 3 times. Use these customer phrases: [paste].
```

16

Build the page

Get a page live today

```
Build a single-file HTML landing page from this copy: [paste copy]. Mobile first, fast, no frameworks. Style: [dark and minimal / light and warm / describe]. Include an email signup form that posts to [form URL or leave a placeholder], a sticky call-to-action button on mobile, and proper meta tags for sharing. Give me the complete file and the steps to publish it.
```

17

Roast my page

The page gets visits but no signups

```
Here is my landing page: [paste copy or describe it]. Act like a skeptical [customer] seeing it for 5 seconds on their phone. What did you understand? What made you leave? Then give me the 3 changes that would most increase signups, in order.
```

18

30-day content calendar

Plan a month in one sitting

```
Create a 30-day content calendar for [platform] for [business] that helps [customer] with [problem]. Weekly rhythm: lesson, story, behind the scenes, how-to, proof (real only), personal why, recap. For each day: the hook, the idea in one sentence, the format and the call to action. Return it as a table I can paste into a Notion database.
```

19

Hook bank

Every video needs a first line

```
Write 25 scroll-stopping hooks for [niche] aimed at [customer]. Mix: contrarian takes, mistakes, "how I", numbers (only real ones I give you: [my real numbers]), questions and stories. Under 12 words each. Mark the 5 strongest and say why.
```

20

Story to script

Turn your experience into content

```
Turn this story from my life into a 45-second vertical video script: [story]. Structure: a hook in the first 2 seconds, the tension, the turning point, the lesson, and a call to action to [action]. Write it the way I talk: [paste a caption or transcript of me talking]. Include on-screen text suggestions.
```

21

Why did this one work?

A post beat your average

```
This post did far better than my average: [paste caption or script, plus the numbers]. My usual posts look like: [paste 2 examples].

What did this one do differently: hook, format, topic, emotion, length? Give me 5 new ideas that use the same winning pattern so I can double down until it stops working.
```

22

One video, five posts

Get more from what you make

```
Here is the transcript of one of my videos: [paste]. Turn it into: a carousel (slide-by-slide text), a text post, 3 short clips with timestamps and hooks, and an email to my list. Keep my voice.
```

23

Edit plan for CapCut

Before you edit

```
I filmed this: [describe the footage or paste the script]. Write a shot-by-shot edit plan for a 30 to 45 second vertical video in CapCut: where to cut, when to zoom or punch in, on-screen text for each beat, where b-roll goes, music mood, and caption style. The first 2 seconds must earn the next 10.
```

24

Comment-to-DM flow

Setting up ManyChat

```
I want people to comment [KEYWORD] on my posts to get [free thing]. Write: the call-to-action line for the post, the public reply to their comment, the DM that delivers the link and asks one question, and a follow-up DM 24 hours later for people who did not click. Friendly, short, never pushy.
```

SALES

25

Warm outreach

Your first customers are people you know

```
Write 3 short DMs to people I already know, telling them about [offer] for [customer]. One to a close friend, one to someone I have not talked to in a year, one asking for a referral. No pitch in the first line. Make each feel personal and under 60 words. Include where I fill in something specific about them.
```

26

Prep for a sales call

Before a call

```
I have a call with [person, role, company] about [offer]. What I know about them: [notes]. Give me: 5 questions to understand their situation, the 3 objections they are most likely to raise with honest answers, and how to ask for the next step clearly at the end.
```

27

Follow up after the call

Right after you hang up

```
Here are my notes from a call: [paste Granola notes]. Write a follow-up email that recaps what they told me in their words, proposes one clear next step with a date, and answers the concern they raised. Under 150 words. Also give me the two-line note to log in my CRM.
```

SYSTEMS AND CEO

28

Weekly CEO review

Every Monday

```
Run my weekly CEO review. Last week: revenue [x], new customers [x], leads [x], content posted [x], hours worked [x]. What I did: [list]. What got in the way: [list].

Ask me 3 hard questions about what I am avoiding. Then tell me what to stop, what to keep and what to start, and help me pick 3 priorities for this week. Not ten. Three.
```

29

Turn a brain dump into a process

You keep doing the same task

```
Here is how I do [task], as a messy brain dump: [paste]. Turn it into a step-by-step process someone else could follow without asking me: purpose, when it happens, tools, steps with checkboxes, what good looks like, and common mistakes. Then mark which steps AI or an automation could do.
```

30

Find what to automate

You are the bottleneck

```
Last week I spent my time on: [list tasks with rough hours]. My tools:
[Notion, Attio, Granola, ManyChat, Shopify, etc.].

Rank the top 5 tasks to automate or delegate by hours saved. For each:
the simplest way to do it with my tools, roughly how long setup takes,
and what could go wrong. Start with the one I could set up today.
```

Unless the Lord builds the house, the builders labor in vain. Psalm 127:1

© 127 Group LLC · 127group.io
